SUMMARY

Software Full-Stack Developer with hands-on experience building modern web applications across both frontend and backend environments. Strong background in frontend development, complemented by experience designing APIs, integrating databases, implementing business logic and connecting third-party services.

WORK EXPERIENCE

Freelance Web Developer

May 2026 – Present

Project: [Echo Koh Tao](#)

- Designed and developed responsive landing web pages focused on converting visitors into potential guests.
- Implemented technical SEO fundamentals, including semantic HTML, metadata, indexing configuration, and search engine optimization.
- Optimized website performance, responsive behavior, and image delivery for a fast experience across desktop and mobile devices.
- Managed deployment and production configuration, taking the website from development to a live environment.
- Integrated automated workflows to streamline guest data management

Frontend Developer – [Vincula Group](#) for Sinergia Tech

Nov 2025 – Mar 2026

- Led frontend development for a transportation management system designed to handle operational data for a trucking company.
- Designed and implemented the frontend architecture for a small development team working on a business-critical application.
- Developed React interfaces with a focus on maintainability, component reusability, and consistent development practices.
- Implemented application state management using Redux.
- Developed a React-based mobile application used to scan barcodes from transportation labels and process operational data.

Software Full Stack Developer – [Software On the Road](#)

Sep 2023 – Nov 2025

- Utilized React, Typescript, MUI, Node.js, Express, Next.js and databases including MongoDB and PostgreSQL on my day-to-day work.
- Progressed from Frontend Developer to Full Stack developer, taking ownership of frontend architecture, technical decisions, and development practices.
- Worked with Server-Driven UI architectures to dynamically render application interfaces based on backend-provided configurations.
- Worked on enterprise integrations with SAP systems and external services.
- Contributed to backend development when required, extending my role beyond frontend implementation.
- Integrated SEO best practices into web applications, by optimizing metadata, using semantic HTML and implementing structured data. This measurably enhanced discoverability.
- Worked on enterprise integrations with SAP systems and external services.

EDUCATION

2021 – 2024 **University Bachelor in Information Technology Application Development (TU-DAI)**
Universidad Nacional del Centro de la Provincia de Buenos Aires (UNICEN)
